

RAG Document Parsing Test File

Fixed keyword: RAG_TEST_KEYWORD_2026

This PDF is used to test document_loader.py.

It is intentionally written in ASCII text so PDF text extraction is easier to verify.

Core concepts:

1. Document loading converts local files into plain text.
2. Text splitting breaks long text into retrievable chunks.
3. Embedding converts text into vectors.
4. Retrieval finds relevant chunks for a user question.
5. Generation sends context and question to the language model.

Checklist:

- Extracted text should not be empty.
- The fixed keyword should remain visible.
- The line order should be mostly readable.
- Table-like rows may lose visual structure.

Table sample:

Format	Supported	Note
--------	-----------	------

TXT	Yes	Best for minimum tests
-----	-----	------------------------

Markdown	Yes	Headings and lists remain as text
----------	-----	-----------------------------------

Word	Yes	Requires python-docx
------	-----	----------------------

PDF	Yes	Scanned PDFs may need OCR
-----	-----	---------------------------
